

TrolMaster Certified Installer Program

TrolMaster is expanding our network of Certified Installers. We are looking for highly skilled and motivated installers to work with TrolMaster (TM) and ThinkGrow (TG) Products. We continue to expand our product lines and the need for professional, qualified installers has increased. Our products are available on every continent in the world, except Antarctica... and we are working on that!

We are offering to collaborate with established companies and individuals who are experienced and skilled in low-voltage control wiring, general electrical installation, and indoor horticultural environments. As an installer for TrolMaster and ThinkGrow, you will continue to work as an independent contractor. Becoming a Certified Installer will increase your businesses exposure. We will refer clients and add you to our Certified Installer List on the TrolMaster website. Our Tech Support is available to assist you M-F 8 AM – 5 PM MST.

To apply to become a Certified TrolMaster Installer, complete this form and email it to support@trolmaster.com. Once we receive the completed form, you will receive a call to discuss becoming a TrolMaster Certified Installer. You will then be required to sign an agreement and attend our online TrolMaster Certified Installer Training Class

Type of Installer _____ Company (not a Retail Hydroponic Store) _____ Individual
Check One
